Foreword

The purpose of a brand manual is to provide instructions for the brand identity system. It is not only about pursuing form and aesthetics, but also about providing a visually understandable manual for cross-departmental collaboration and even external communication.

We need to deeply consider how to concisely express the logo's adaptability across all application scenarios. The following sections are the current priorities; produce them in order.

Background Color Usage

Background color is a key element in determining the tone and atmosphere of a brand's visual identity. It provides a canvas for your content and plays a vital role in creating a cohesive and engaging user experience. In this section, we outline guidelines for using background colors to ensure consistency and enhance the overall aesthetic of your brand.

To ensure consistency and professionalism for the BOT Chain brand across all communication channels, we have developed detailed brand typography guidelines. The primary font is used for headlines and main slogans, while secondary fonts are used for body text and explanatory text. Through consistent font selection, colors, and typography, we maintain a consistent brand image, enhancing visual appeal and readability. These guidelines help us convey a professional and consistent brand image across all brand materials.
